

Baconinflate Environmental - Recycling Policy

In 2007 Baconinflate set out to become the first temporary structure supplier within the UK to actively support the **Texyloop**® PVC fabric recycling process. Baconinflate remains the only UK supplier within its sector to recycle waste as part of its standard fabrication process. Baconinflate continues to strive to set the standard and reviews its day to day operation on a regular basis in order to meet the companies cleaner, greener objectives.

5 stage Texyloop recycling process;

- 1 Crushing,
- 2 Selective dissolving,
- 3 Fibre separation,
- 4 PVC precipitation,
- 5 Solvent regeneration

5 good reasons why Baconinflate supports the **Texyloop**® process and chooses to recycle its waste fabric through its standard product fabrication within the UK;

Baconinflate helps solve the scrap problem

Burying and land filling our products is not a long-term solution.

Incineration is of little interest. Even worse for the environment is "illicit" dumping or open-air burning of old tarpaulins.

Baconinflate contributes to the suppliers resources

Every tonne of new raw material produced by **Texyloop**® recycling means fewer non-renewable energy and other resources need to be extracted from the Earth. You're then taking a lengthy stride toward dematerialisation.

Baconinflate puts the final touches to your long-term strategy

Light: Architectural and other textile structures don't use many resources because both fabrics and structures are light, so the implementation impact is reduced. Realisations are based on the twin principle of the "right quantity at the right time".

Lasting: With their easy maintenance, textile structures are used over and over again. Adjustable and transformable, they can be reused for a variety of applications.

Recyclable: Lastly, **Texyloop**®, recycling now makes it possible to reconstitute end-of-cycle basic resources.

Baconinflate is responsible and stays one step ahead

Thinking ahead about statutory requirements is a salutary act of management.

Being subjected to regulations means sooner or later being obliged to pay a high price - the price of ignorance.

Baconinflate is pragmatic, and choose to act now!

Long-lasting development, Saving the planet, etc... there's no shortage of sparkling speeches but real actions are somewhat duller.

So let's do something!

Sure, against us will be "all those who do exactly the opposite, plus the overwhelming majority of those who are all the more critical because they do nothing at all." -René Char (poet, 1907-88).
